

D1 30% Evaluation Parameters
for
Web Based Projects

There should be following parameters in the projects.

1. There should be at least three **web pages**.
 - a. Home page
 - b. Login page
 - c. Registration page
 - d. Dashboard page
2. There should be **URL based navigation** between above web-pages.
3. **Complete Login/Registration system**: This system should include following sub components
 - a. Web page for login form
 - b. Web page for registration form
 - c. User data should be validated on client side for both login and registration form.
 - d. User data should be validated on server side for both login and registration form.
 - e. Email should be verified by sending some token to user's email address and then verify the token. The token should be validated only for one day.
 - f. After successfully registration, data should be saved into the database.
 - g. With correct email and password, the login form should show success message or navigate to new page. The message/navigation is just used to show that email and password is same as saved in the database.
 - h. During registration, user should be able to upload his/her profile photo. This photo should be displayed on dashboard page, when user will view his/her profile.
4. **Session maintaining**: Dashboard page should be opened only if user is successfully logged-in or registered. It is noted that if the user tries to open dashboard without logging or registering, then dashboard-page shouldn't be opened but it should redirect the URL to login-page.
5. **User types**: There should be at least two types of users.
 - a. Admin
 - b. Non-Admin
6. **Dashboard types**: There should be two types of dashboards according to above users.
 - a. For Admin-user
 - b. For non-Admin-user
7. **CRUD operations**: Each user can perform operations (create, read, update and delete) on database-data using dashboard-page.

Below are some example-operations for Admin-user.

 - a. Admin can see all registered-users in his/her dashboard-page in form of table.
 - b. Admin can delete any registered-user from his/her dashboard-page.

Below are some example-operations for non-admin user

- a. The user can click on edit-profile button (shown on his/her dashboard) and then edit his/her data saved in the database.
- b. The use can change his/her profile photo.
- c. The user can change password. The password should be changed **securely**. For example, when user request to either change-password or forget-password, then an email should be sent to his/her registered email address. The email should contain secret token (valid for one day one). The token can be used to reset the password.
- d. The user can view his/her complete profile.
